KeyCode Mystique

For this task they have given a set of characters

```
qsz bhm sefc edft iklp ujko sefc ujko axdw drgv yhji bhjm
```

While seeing the characters i mistook this as a encoded problem ,then using the online text decode analysis
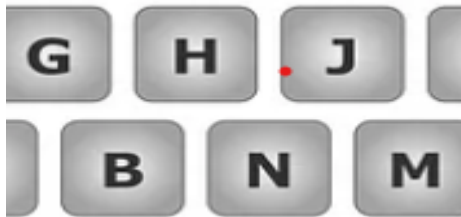

I cross checked all the known ciphers such a s caesars vigenere etc ,but was not able to identify it ,then while going the question they have highlighted the word keyboard so by observing the keyboard identified this was not some ciphers decoded message but was something that had to do something with the keyboard

After few attempts i was able to understand the pattern

 qsz refers to the letter : a

 bhm refers to the letter :n

I

Here this the keyboard layout of a qwerty keyboard that is commonly used the letter a is in between the letters qsz similarly the letter n is between the letters bhm after doing this for the entire text i got the flag

FLAG : p3nt35t{androidisfun}
