Archduke_cooking_blogs

For this task they have given the ip address of an website
Our task is to find the flag that is hidden in the website
For this i have used a tool name Dirb which is called as the directory buster,it is a web content scanner that looks for hidden or exacting objects .It works by launching a dictionary based attack against a web server and analyzing the response

The ip address that is given :http://4.213.89.50:8000/
So by taking the terminal and enter the command as per the syntax
dirb (ipaddress)

After scanning the website we get two files
Parent.directory
Flag .html
Opening the flag.html we get our required flag

FLAG :p3nt35t{4rch-duk3_g0t_bu5t3d!!!!!}
